**U.S. Navy Awards Contract for inView™ Surveillance System**  
*inView Surveillance Systems to Monitor Critical Handling Processes*

January 17, 2006--PORTLAND, OR--iMove®, a leading provider of wide-area immersive video surveillance systems for defense, homeland security agencies and commercial applications, announces the award of a \$1.4 million contract with the US Navy for operational deployment of an inView Surveillance System. The inView Surveillance System will provide the US Navy with continuous, wide area coverage for process and performance evaluation of critical handling production processes.

“The inView Surveillance System is the perfect product to monitor high value assets, providing high resolution, continuous coverage of the entire production area so events of interest are never missed.” said Rick Mandrell, VP Product Management. “The ability to seamlessly cover large areas, providing real-time viewing, instant replay and post event analysis is proving to be a key requirement with the US Navy.”

The inView Surveillance System is built on iMove’s patented immersive software architecture that combines multiple video streams into a seamless, perspective correct wide-area view. iMove’s FlexG™ (Flexible Geometry) camera technology enables the configuration of extremely high resolution, multi-camera sensors that offer unparalleled coverage and image detail across large facilities and long perimeters. inView’s real-time immersive software captures, seams and displays the image on the WideView™ Console, which offers industry leading immersive resolution to maximize situational awareness and operational effectiveness.

“Looking at video from the inView Surveillance System is like looking out a window,” said John Herring, President and CEO. “The coverage inView provides, combined with the intelligence analysis and on-line archive with instant replay makes inView the complete solution for wide-area monitoring and surveillance.”

iMove is now offering inView to select government agencies and commercial organizations with critical asset protection or process monitoring needs that benefit from the wide-area coverage and high resolution capabilities inView offers.

**About iMove, Inc.**

iMove is a leading provider of immersive visual solutions for mission-critical security and surveillance applications. iMove’s solutions deliver higher resolution visual information and expanded situational awareness using automated features to dramatically enhance mission performance while reducing cost and complexity. Our solutions are deployed at home and abroad for the prevention of potentially catastrophic incidents associated with critical infrastructure and for intelligence and special operation forces mission planning and training systems. iMove is based in Portland, Oregon.
